Go To <http://www.whatismyip.com>, learn your ip address

The screenshot shows the homepage of WhatIsMyIP.com. At the top, there are buttons for 'Log In' and 'Create Account'. Below that, a navigation bar includes 'Home', 'Speed Test', 'IP Lookup', 'Hide My IP', 'Change My IP', and 'Questions'. A sidebar on the left lists 'AdChoices' with options 1 through 4: 'Check My IP Address', 'What Is My IP', 'IP Test', and 'Proxy IP Address Change'. The main content area displays 'Your IP Address Is:' followed by the IP address '93.141.69.63'. Below this, it shows 'City: Karlovac', 'State: Karlovacka zupanija', 'Country: Croatia', and 'ISP: Croatian Telecom Inc.'. To the right, there is an advertisement for 'OFFICE 365 THE EASY WAY' featuring a person working on a laptop.

Return to Cisco Umbrella Wizzard and Click "Next"

The screenshot shows the 'Protect Your Network' step of the Cisco Umbrella setup wizard. It asks to point public DNS to Cisco Umbrella DNS servers. Two input fields show '208.67.222.222' and '208.67.220.220'. Below this, a note says 'For more information on how to do this, and customized router instructions, [click here](#)'. A button 'Now just give your network a name and you'll be good to go.' is present. The 'Network Name' field is empty. The 'IP Address' field contains '93.141.69.63' and the 'Subnets' dropdown shows '32 (1 IPs)'. At the bottom are 'Skip This Step' and 'NEXT' buttons.

Download your preferred client and Click "Next"

The screenshot shows the 'Protect Roaming Computers' step. It highlights the 'Cisco Umbrella roaming client' and provides download links for 'Windows Client' (Supported Versions: Windows 7, 8, 10) and 'Mac OS X Client' (Supported Versions: OS X 10.9+). A note says 'For more advanced setup instructions, read our [Roaming Client Setup Guide](#)'. At the bottom are 'Skip This Step', 'PREVIOUS', and 'NEXT' buttons.

The screenshot shows a Mac OS X file dialog titled 'Opening OpenDNS-URC-mac-2.0.39.zip'. It says 'You have chosen to open: OpenDNS-URC-mac-2.0.39.zip which is: ZIP file (2.2 MB) from: <https://dashboard.umbrella.com>'. It asks 'What should Firefox do with this file?' with options: 'Open with Archive Utility (default)' (radio button unselected), 'Save File' (radio button selected), and 'Do this automatically for files like this from now on.' (checkbox unselected). At the bottom are 'Cancel' and 'OK' buttons.

Click on "Start Using Cisco Umbrella"

The screenshot shows the 'Setup Complete' step. It congratulates the user and says 'You have set up your first network and downloaded the roaming client. Make sure you [install it](#) to complete the deployment process.' Three blue star icons are displayed. At the bottom are 'PREVIOUS' and 'START USING CISCO UMBRELLA' buttons.

The dashboard includes sections for SafeSearch enforcement, more granular protection for malicious files, adding custom URLs to block, and VA upgrades. It also shows 0 requests for Malware and Command and Control in the last 24 hours.

or go to <https://dashboard.umbrella.com>, login to Umbrella Dashboard

Good evening, J!

Uh oh. It looks late in your timezone, hope it's nothing serious.

[Not J? Switch account or sign up for a free trial](#)

New AnyConnect Integration Makes Off-Network Protection Easier

Umbrella now integrates directly with AnyConnect, so you can get simple, effective security for roaming devices with little more than a configuration change. By updating AnyConnect you can get Umbrella's protection with no additional agents, no end-user action, no always-on VPN, no performance sacrifice—and at no additional cost.

If you already have the Umbrella Roaming Client deployed, switching is as easy as upgrading to AnyConnect 4.3 M1 with the Umbrella Roaming Security module enabled. It will automatically convert your Roaming Client with no additional steps!

Going Beyond Domain and IP Blocking

More granular protection for attacks that use malicious files now available in Umbrella!

We've enhanced our intelligent proxy, which routes risky domains for deeper inspection, to now include file inspection. If we receive a request for a file that matches our 150+ file types—for example PDF, EXE and Microsoft Office—against info provided by a partner anti-virus (AV) engine and Cisco Advanced Malware Protection (AMP) to determine to block or allow.

Policy Management Made Easier

Say hello to our new policy wizard, which makes even the most complex policies easy to create, and streamlines the simplest of policies by cutting out unnecessary steps. Just answer the questions in the guided wizard to select the relevant identities and settings, and finish by quickly reviewing the new summary page. You can even use the policy tester to make sure the policy is being applied correctly before enabling it.
